

CONTACT INFORMATION FOR YOUR COVER CROP NEEDS

Minnesota Cover Crop Business Directory

June 2016

POTENTIAL BENEFITS OF COVER CROPS

The addition of cover crops in a farm rotation has the potential to produce multiple benefits. These benefits include, but are not limited to:

- Reduced soil erosion
- Increased soil organic matter
- Increased nutrient management
- Reduced soil compaction
- Increased water infiltration
- Reduced weed pressure
- Livestock forage/grazing

COVER CROP ESTABLISHMENT

Cover crop establishment methods included:

- Drill or Planter
- Broadcast (with and without incorporation)
- Interseeding into standing cash crop
 - Aerial or high-clearance vehicle
 - High-clearance drill or similar unit
- Frost seeding
- Manure slurry seeding

COVER CROP TERMINATION

Cover crop termination methods include:

- Frost/freezing
- Herbicides
- Mechanical
 - Tillage
 - Mowing
 - Roller/crimper

Custom Seeding

EQUIPMENT AVAILABILITY AND FUTURE OPTIONS

Cover crop related equipment and technologies are quickly adapting to the needs and operations of farmers. Co-ops, equipment manufacturers, local conservation offices, and farmers themselves are developing new equipment or retrofitting old equipment for new uses that are specific to cover crop establishment.

- Drill or Planter: Contact your local implement dealer for purchase or lease cost.
- Fertilizer Spreader: Contact your local co-op for availability and rental cost.
- High-clearance Vehicle: Contact your local co-op for availability of a high-clearance vehicle capable of granular fertilizer application and therefore cover crop seeding.
- Interseeder Drill (or similar unit): One unit, commonly called the Pennsylvania Interseeder (<http://www.interseedertech.com/product-details/>), is capable of planting, side-dressing nitrogen, and drilling in cover crops at V4-V8 in corn. Other similar units are being manufactured by equipment companies. Farmers are also building similar units.
- No-till Drill: Contact your local soil and water conservation district or local co-op for availability and rental/lease cost.
- ROWBOT: A Minnesota company in development for a robot unit that will be capable of side-dressing nitrogen and seeding cover crops. www.rowbot.com Contact, Kent Cavender-Bares
